

NEREUS GNSS Working Group General Assembly 1 July 2013

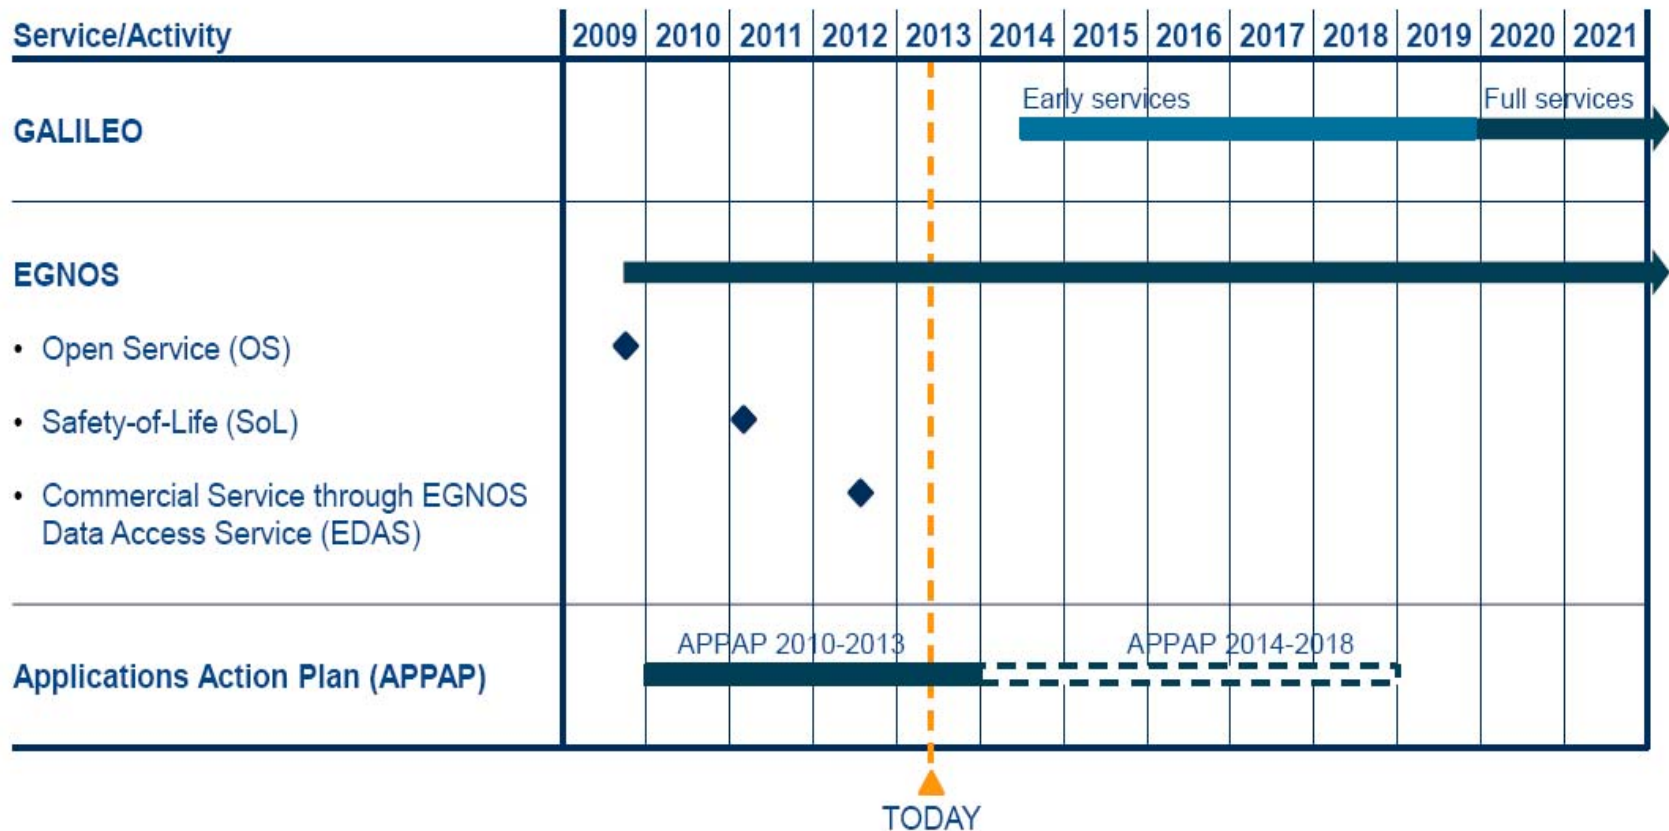

Pierpaolo Campostrini
campostrini@corila.it

Chair of NEREUS GNSS WG

CORILA - Veneto Region

As the deployment of Galileo is accelerating, efforts on adoption measures should increase

Deployed/Implemented
 Proposed

GALILEO set the development of GNSS applications a key priority for Europe

- The deployment of Galileo is very close
- Positioning the EU industry on emerging markets of navigation app
- Wider commercial benefits are expected for many other businesses and sectors.

Efforts to boost applications shall increase

Among the barriers slow down the development of applications (COM 2013)108final

- The lack of awareness by possible users
- The lack of cooperation between space and non space sectors
- The lack of cooperation between data providers, service developers and end users
- the insufficient support to the creation of start –up

**Added value of
NEREUS**

Strategic context 2013

- **Regulation** of the European Parliament and of the Council on the implementation and exploitation of European satellite navigation systems:: **PROPOSALS FROM NEREUS ACCEPTED !!!** 😊
- **H2020** will also provide a platform to stimulate GNSS-related and applications-oriented R&D
- A **GNSS Application Action Plan 2014-2018** is being considered by EC, with cross-sectorial actions that build strongly upon Application Action Plan 2010-2013.

Activities of the WG - tbd

- Participate into the public consultation on applications of EU satellite navigation programmes (Galileo and EGNOS) to be concluded the 14th of July
- Cooperate with EC and GSA in implementing the “Regulation on the implementation and exploitation of European satellite navigation systems”
- Dialogue with the EC and with GSA in the view of the next Horizon2020 and other relevant calls, as well as in the APPAP 2014-2018
- ***Involve WG members in project funding opportunities***
- Increase visibility of the network at regional and European level, through initiatives (seminars, workshops, publications etc) to be decided in agreement with GSA and other institutions.
- Explore how regional innovation programs and schemes could be exploited to stimulate and support the development of GNSS-applications
